

### **Running Instruction**

I uploaded a Jar file but I am not sure if it will work or not. The professor said it is fine if the program can be run by using the command prompt. So here are the instructions:

- 1) Ensure the folder hierarchy is maintained during extraction
- 2) Open Terminal/Command Prompt
- 3) Change directory to main Blokus folder
- 4) Enter compile code:  
`javac *.java`
- 5) To run, use the code:  
`java Driver`

### **Use Case Descriptions and Implementation:**

We implemented the use case "Choosing Difficulty". But for our second use case description "Selecting blocks and deducing from Block Bank" we wrote the code and it is present in the java file but we couldn't display it on the user interface yet.
